Decree No. 103/2017/ND-CP

Planning/design of nursing centres for aged people (instruction, not yet standardised)

- ☐ Six function zones: residence, kitchen and dining room, staff, entertainment, healthcare and technical facilities;
- ☐ Land area: minimum 30 m² per person (in rural areas) and 10 m² per person (in urban areas);
- ☐ Room floor area: 6 – 8 m² per person;
- ☐ Planning: The site must be easy for access from main roads, not far from a public/private hospital, not affected by noise or air pollution;
- ☐ Adequate power/water supply.

Decree No. 140/2018/ND-CP

Implementation of the Law targeted at disabled people (including aged disabled people)

- ☐ Requirements for staff working at social aid centres in general and disabled people aid centres in particular.
 - + Qualifications
 - + Skills
 - + Responsibility
 - + Experience
- ☐ Training programme attendance.

A specific design standard for aged people (not just in architecture) has not yet been developed or included in the National Building Standard.

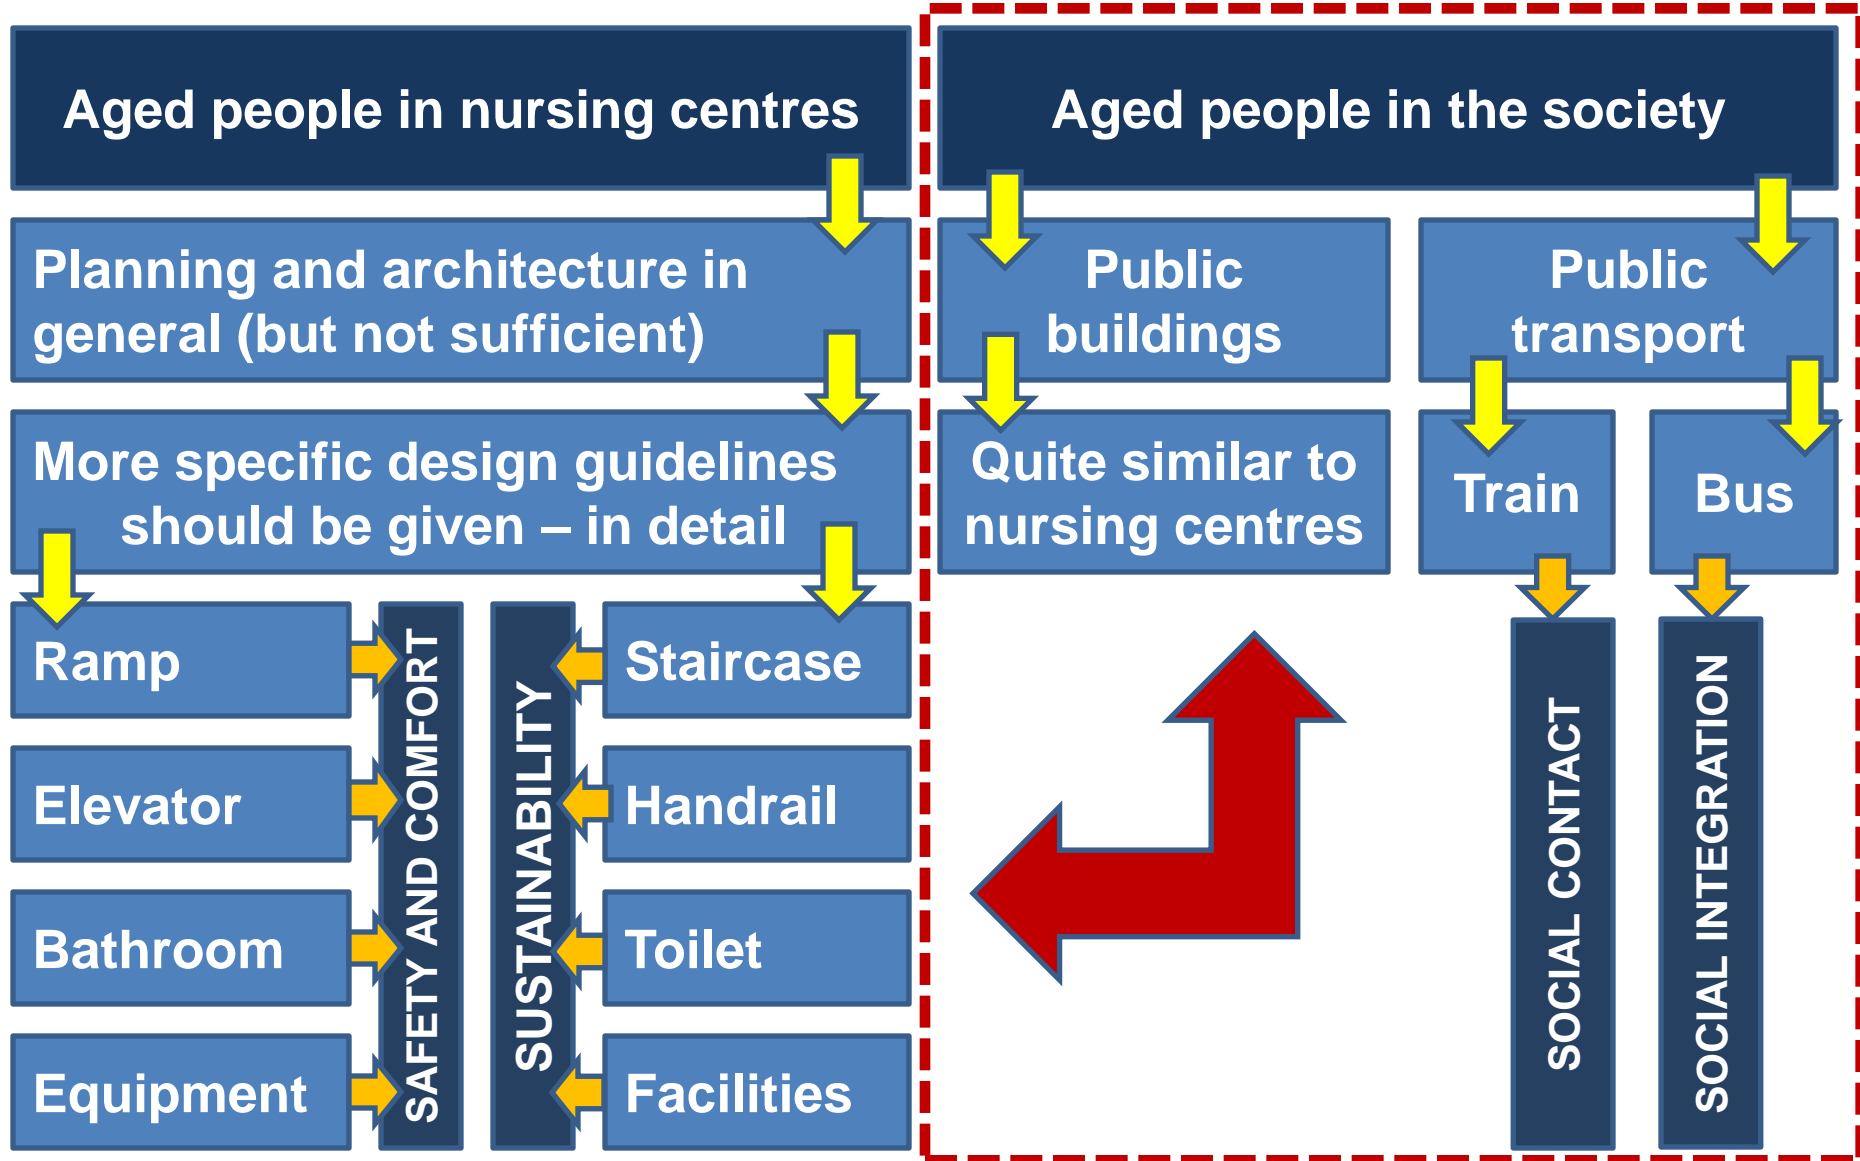

Age-friendly Design for Communities

2. Ageing in Vietnam – architecturally and legally considered

	State nursing centres	Private nursing centres
Location	Mostly located in densely populated areas	Mostly located in the suburbs or new urban areas
Land plot area	Mostly less than 1 ha	Mostly more than 1 ha
Investment	From state budgets	From private funds
Capacity	Usually over 300 aged people	Usually 50 – 150 aged people
Situation	Often overcrowded	Not crowded
Building quality	Mediocre to poor	Good to very good
Type of use	Adaptive reuse of old buildings (upgraded)	New design (initially planned and built)
Equipment	Not so well equipped	Well equipped
Facilities	Inadequate	Standard
Landscape	Not properly designed	Usually well designed

4. Recommendations

Age-friendly Design for Communities

5. Conclusions

- ❑ Today, Vietnam is reported to have entered a golden era of population. But in the future, the country will have to face an ageing society;
- ❑ Vietnam has to get better prepared for the future forecast to be ageing more rapidly than the world's average rate;
- ❑ Age-friendly design encompasses a wide range of design sectors, not just building design, but also other fields, such as equipment design, vehicle design, product design, etc.;
- ❑ In terms of architectural design, more geriatric hospitals and nursing centres should be built to meet the demand;
- ❑ More intensive investigations need to be systematically undertaken for a complete design standard with design guidelines targeted at aged people.
